(54) LIGHT-EMITTING ELEMENT**(57)Abstract:**

PROBLEM TO BE SOLVED: To realize a good carrier balance with a single-layer element with an organic compound layer arranged between a pair of electrodes mounted on a substrate, and provide a novel light-emitting element having low-voltage drive, high intensity, high light-emitting efficiency, and further, high-temperature preservation durability.

SOLUTION: With the light-emitting element with an organic compound layer formed between a pair of electrodes mounted on a substrate, the degree of electron transfer of the organic compound layer has the value of $3 \times 10^{-5} \text{ cm}^2 \text{ V}^{-1} \text{ s}^{-1}$ or more within the range of field intensity of 400 to 1,000 $(\text{V}/\text{cm})^{1/2}$ and the organic compound layer contains a light-emitting compound.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the
examiner's decision of rejection or application
converted registration]

[Date of final disposal for application]

[Patent number]
